JEWELL Engineering Consultants (JEC) attended the recent North Carolina Chapter American Public Works Association (APWA), Water Resources Division conference, “Planning & Implementation Tools to Meet Evolving Stormwater Demands” held in Wrightsville Beach, NC on September 17th and 18th, 2007. Almost 200 engineers, municipal representatives and others attended the well prepared conference. JEC was a sponsor of the elegant mid-day meals for the conference attendees and also made a well received and informative presentation on stormwater wetland creation on the first afternoon of the conference. The presentation by Doug Jewell explained how JEC worked with the Piedmont Triad Council of Governments and the City of Reidsville to utilize a small area within a town park to manage stormwater quality by constructing a wetland for treatment of pollutants within the watershed (see presentation). The wetland is performing very well one year after construction as was visible in the presentation photos. JEC also hosted an evening dinner on the Cape Fear River at the Pilot House Restaurant for JEC staff and clients. As visible from the photos, the weather was gorgeous and the entire conference was well received by all.
